

BIOANALYTICAL CONTRACT RESEARCH

## CELEBRATING WOMEN'S HISTORY MONTH

### Spotlight on Juan Rogness, Associate Director

Pyxant Labs is proud to have a staff full of women worth celebrating, and we couldn't let Women's History Month pass without a nod to our esteemed Associate Director of BioA, Juan Rogness.

Juan has been working at our Utah site for 15 years and has a master's degree in Pharmacology and Toxicology and an MD from China.

Her journey began as a principal investigator, then she later became a senior PI, then a manager, and finally entered into her role as Associate Director of BioA. As a Director of Bioanalytical Sciences Juan leads staff and directs bioanalytical studies to fulfill client's technical and regulatory needs, in order to maximize our partnerships with clients.

Juan is such a strong asset to the company and is always a welcome and warm face at our Utah site. Outside of work, she enjoys cooking as one of her favorite relaxing pastimes.

One of the many highlights over the course of her 15-year career is, "having two drugs approved by the FDA." During her role as PI, one of the sponsors took the time to write her to say she was, "one of the two best PI's they ever worked with!"

Her number one bit of advice for women in the science field is, "Stick to what you love, never give up, and be patient with the process and yourself."

Three words she uses to describe herself are, "loyal, stubborn, and I stick to what I love."
